

VACUUM LEAK TESTER

The GALTA-151 is used to test for the integrity of packed strips, blisters and small sachets containing tablets, granulates, liquids.

The instrument is used to test the quality of the packaging process and to check that the seals enclosing the product are perfectly intact.

The GALTA-151 Leak tester is designed to find the smallest leaks and imperfections in blister packs and other semi-rigid product packaging. It is designed in compliance to the USP monograph <1146>.
